AI at Work

Win back time, lower the cost per task

Win back time and lower the cost per task while quality stays the same. AI at Work for Austrian KMU: automation in your existing apps and optionally in Microsoft 365, with specialized agents for every use case.

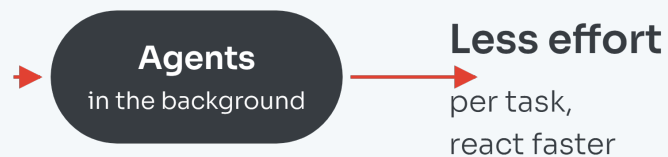

Cost Savings with AI Automations

Respond faster, with less effort per job

Our agents automate recurring work in the apps your company already runs: typing up data, copying between systems, drafting replies. This work runs in the background while your staff focus on their real work. That is your competitive advantage, day after day.

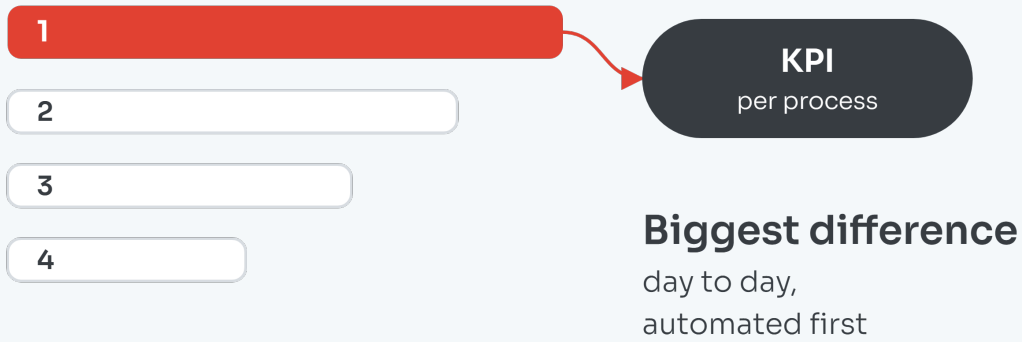

- ✓ Typing in data
- ✓ Copying data
- ✓ Writing replies

Value Discovery & KPI Mapping

Where an automation makes the biggest difference

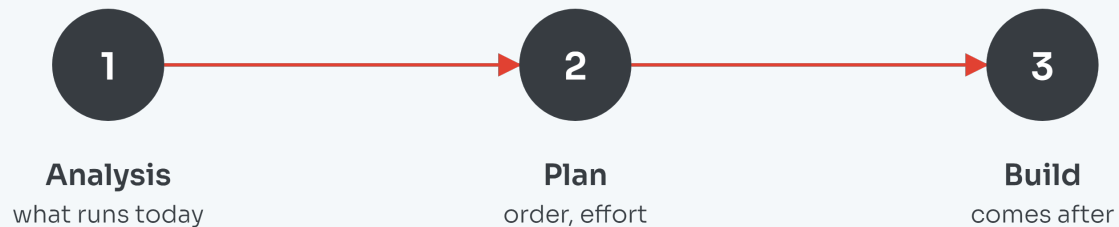

Value Discovery finds out which of your processes take the most time in day-to-day business and are suited to automation. Every process gets scored before a decision is made. The result is a list that shows where an automation makes the biggest difference.

Implementation Planning

What gets built, in what order, with what effort

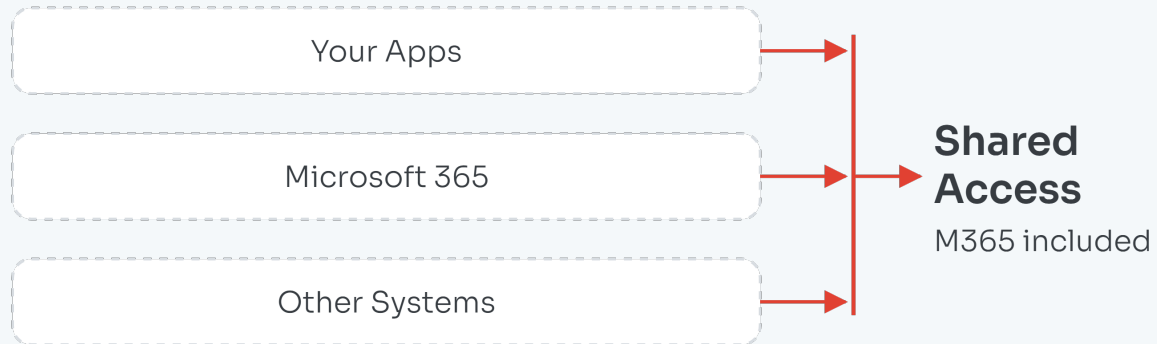

After Value Discovery, we analyze your existing apps: which functions already exist and where an extension or integration comes in. This analysis produces a plan that sets what gets built, in what order and with what effort, before implementation starts.

Automations & Integrations

Every app stays where it is

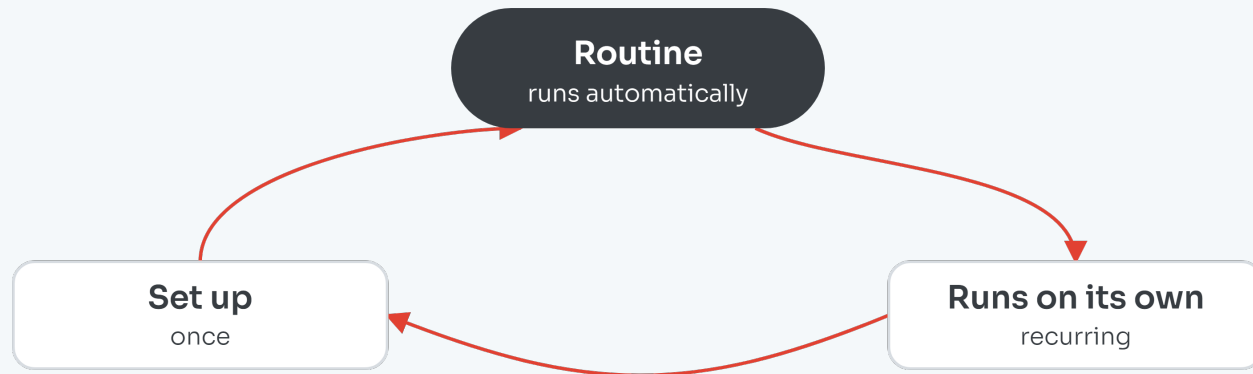

Your apps stay as they are: same login, same data, same way of working. The AI also gets access to them, Microsoft 365 included, like any other application in the company. Every app becomes part of one shared, continuous access.

Cowork Office Integration

Recurring tasks run by themselves

With Claude Cowork you build your own flexible automations, using the access to your apps we set up as the foundation. Fixed routines can be sent to individual apps on a schedule, so recurring tasks run by themselves.

Governed Rollout & Cost Control

You see what every automation really costs

Costs are optimized in advance and monitored continuously, and you see what every automation really costs in operation. For every use case, the documentation shows which integration is run by which agent. The compliance check is a fixed part of the same rollout.

Staff Training

What your team learns sticks

Your staff learn Claude Cowork with material built from your own documents, templates and examples, using your own processes and your own wording. From the first hour the exercises are real tasks from everyday work, and that is exactly why what they learn sticks.
